### Message from the Guest Editors

The prevalence of pediatric liver disease is increasingly worldwide and representing a major public health concern. Although, several factors are involved in this increase, nutrition is playing a critical role in liver disease pathogenesis.

The objective of this proposed Special Issue on “Nutrition and Pediatric Liver Disease” is to publish selected papers (Original research articles, review article, case reports) that will provide the understanding and implication of nutrition in pathogenesis of pediatric liver disease. Also covers the topic of dietary intervention and related therapeutics approach to minimize the risk of liver diseases in pediatric population. In addition, issue will provide the comprehensive understanding and investigation of involved metabolic pathways and nutrition based preventive/therapeutic approaches that can be applied to reduce the hepatic complications in children. Lastly, the knowledge of potential predictive biomarker for liver function/disease at early stage will be helpful to develop therapeutic options for pediatric liver disease.
