Rehabilitation Sciences, 635
Commonwealth Ave, Boston, MA
02215, USA

Dr. Susan M Schembre

Department of Oncology,
Lombardi Comprehensive Cancer
Center, Georgetown University,
Washington, DC 20007, USA

Deadline for manuscript
submissions:

5 November 2024

Message from the Guest Editors

Dietary assessment is an important part of nutritional status evaluation. And accurately assessing diet has always been a challenge. With the widespread use of smartphones and the development and popularization of mobile apps and wearables, the monitoring and assessment of dietary intake is becoming less burdensome, and the methods of dietary intake assessment have also developed more and more rapidly.

The purpose of this Special Issue is to collect research on new methods for monitoring and assessing dietary intake, as well as current research progress, including the assessment of differences in nutrient and energy intake among different groups, and determining the risk of insufficient or excessive nutrient intake. In addition, papers assessing the relationships between lifestyle, physical activity and dietary intake, the consumption of certain food, the relationship between eating habits and eating quality are welcome for submission. Of particular interest are studies reporting on new technologies and objective methodologies for the assessment of dietary intake, including wearables, image-based methods, and the discovery of dietary biomarkers of intake using metabolomics.
