Message from the Guest Editor

Good nutrition in the earliest stages of fetal development, at birth, and through infancy, is essential for survival, physical growth, mental development, and health. Newborn nutrition and early childhood stimulation interventions represent part of an integrated life-cycle approach to prevent communicable and noncommunicable diseases. This Special Issue “Newborn Nutrition” aims to publish original research articles and reviews of the scientific literature in order to explore the latest findings on nutrition in term and preterm babies, to consider the role of newborn nutrition as key determinants of well-being across the entire lifespan, and to propose novel nutritional interventions to prevent chronic diseases.
