Message from the Guest Editors

Vitamins are essential nutritional factors involved in many different processes in the human body. Although their discoveries started early in the 20th century, recent research is still bringing novel information on the physiological activity of different vitamins and in fact, we still do not know some of their functions. In addition, there is a popular but incorrect belief in the general population that vitamins are always safe and “health-promoting” compounds. Hence, papers reporting nutritional aspects related to both positive and negative effects of vitamin administration are welcome for submission. More concretely, we kindly invite all interested researchers to submit quality papers on different aspects of vitamins, including their physiological role and pathological conditions, encompassing both their excess and deficiency, to this Special Issue. The article *must* adhere to the general scope of the journal of *Nutrients* (<https://www.mdpi.com/journal/nutrients/about>).

Original articles, review papers, and short communications with significant novelty are welcome.
