### Message from the Guest Editor

Dear Colleagues,

The present Special Issue aims to gather the latest findings on: (i) the identification and validation of endogenous biomarkers that are modulated by diet, and (ii) exogenous biomarkers (which can be usually consumed alongside with diet) as indicators of dietary exposure with relevance to health status and/or the risk of developing diet-related diseases. Studies focusing on disease biomarkers are outside the scope of the present issue. Authors are invited to submit relevant original contributions, review articles or systematic reviews for consideration for inclusion in this Special Issue.
