## Nutrition Care for Rare Diseases Patients

Guest Editor:

**Dr. Mousumi Bose**

Department of Nutrition and  
Food Studies, Montclair State  
University, 1 Normal Avenue,  
Montclair, NJ 07043, USA

Deadline for manuscript  
submissions:

**closed (30 November 2022)**

### Message from the Guest Editor

The purpose of this Special Issue is to provide a forum to discuss current nutrition care, therapies, and interventions in the management of rare diseases. Individual nutritional status may play a role in the care of individuals with rare diseases. Rare diseases can affect growth, metabolism, feeding, and gastrointestinal function. Moreover, dietary modification has been shown to potentially improve symptoms in several rare diseases.

In this Special Issue, our overall goal is to establish and advance the best practices for nutrition-focused clinical care in and research on rare diseases. By highlighting existing and emerging research focusing on the nutrition-related care and management of rare diseases, we will be able to critically evaluate current nutrition care practices, methodologies for dietary assessment and related outcomes, and the potential effectiveness of dietary therapies for various rare diseases. This will also identify gaps in the field that need to be addressed to inform better clinical trial design for nutrition interventions and dietary recommendations aimed at improving the quality of life for individuals and families affected by rare diseases.
