Deadline for manuscript
submissions:

30 June 2024

Message from the Guest Editor

Dear Colleagues,

This Special Issue considers filamentous fungi and their role as pathogens. Fungi are extremely important components of diseases. The Special Issue will include research about fungi spreading diseases to plants, insects, and humans. The included papers will deal with specific topics or genera of pathogens. Using molecular data to identify species is a prevalent theme in each paper.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
