Message from the Guest Editor

Dear Colleagues,

Recent decades have witnessed an increase in the demand for pathogen detection and other diagnostic methods for animals and wildlife. Surveillance for animal pathogens holds the key to controlling disease transmission, managing persistent diseases, and ensuring the early detection of emerging and re-emerging pathogens.

This Special Issue aims to provide various surveillance plans and diagnosis methods in the early detection of veterinary infectious diseases. We also welcome the most recent research and developments in the epidemiology, disease treatment, control, and prevention strategies of veterinary infectious diseases in domestic and wild animals.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
