Recent Advances in Congenital Anomalies of the Kidneys and Urinary Tract (CAKUT)

Guest Editors:

Prof. Dr. Velibor Tasic

Pediatric Nephrology, Faculty of
Medicine, Ss. Cyril and Methodius
University in Skopje, 1000 Skopje,
North Macedonia

Prof. Dr. Marcin Tkaczyk

Department of Pediatrics,
Immunology and Nephrology,
Polish Mother's Memorial
Hospital Research Institute,
Medical University of Lodz, 93-
338 Łódź, Poland

Dr. Silvio Maringhini

Istituto Mediterraneo per i
Trapianti e Terapie ad Alta
Specializzazione, 90127 Palermo,
Italy

Deadline for manuscript
submissions:

30 June 2025

Message from the Guest Editors

Congenital anomalies of the kidneys and urinary tract (CAKUT) are common malformations and may produce variable kidney damage, which, in some cases, leads to end-stage renal disease (ESRD). CAKUT constitute a frequent cause of birth defects (approximately three to six per 1000 live births). CAKUT may occur either as an isolated condition or as part of a syndromic disorder. Monogenic mutations are responsible for CAKUT in 10–15 % of cases; new genetic studies, including whole-exome sequencing, provide an etiologic diagnosis for many patients. Autosomal dominant polycystic kidney disease (ADPKD) is the most common monogenic cause of renal failure in adults, but it is well known that the disease course begins in childhood. Vesicoureteral reflux (VUR) is defined as the retrograde movement of urine from the bladder into the ureter(s). Children may present with a solitary functioning kidney (SFK) as a consequence of a congenital non-functioning kidney, or after nephrectomy, SFK may lead to renal injury that may end in end-stage renal disease (ESRD).

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Maurizio Aricò

Unità Operativa Complessa
Pediatria Medica, Azienda
Sanitaria Locale di Pescara,
65124 Pescara, Italy

Message from the Editor-in-Chief

Pediatric Reports (PR) journal is a publishing platform for all topics concerning pediatrics, from basic research to bedside care. We aim at targeting a composite audience, from experienced pediatricians to young residents and fellows. Clinical observation of unusual cases will find their tribune, as well as trial reports and results of research related to diseases that may represent frequent or rare events faced by Pediatricians. We look forward to continuing the work done in the past years by *Pediatric Reports*, but also make the journal grow according to changing expectations and attitudes of both, clinicians and researchers who work for more effective pediatric care.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 32.4 days after submission; acceptance to publication is undertaken in 7.6 days (median values for papers published in this journal in the second half of 2023).
