### Message from the Guest Editor

Dear Colleagues,

Cancer is one of the most widely spread and complex forms of disease, cancer cells being distinguished from healthy cells for their altered proliferation and survival. In the past three decades, only the National Cancer Institute (NCI) has screened millions of small molecules for potential anticancer activity. Despite a number of conventional cytotoxic approaches having been developed, their limited effectiveness, in accordance with the heterogeneity of cancer cells, prompts the constant search for novel natural or synthetic compounds with growth inhibition or tumor cell activity killing properties.

This *Pharmaceuticals* journal Special Issue invites both reviews and original articles regarding basic, preclinical and clinical studies on antiproliferative chemical entities.

I look forward to receiving your contribution.
