Deadline for manuscript  
submissions:  
**closed (25 January 2024)**

### Message from the Guest Editors

Hypoxia exerts the up-regulation of both CD73 and CD39 expression, the two enzymes that are involved in the generation of adenosine from ATP/ADP, and of adenosine receptors (ARs). The low oxygen tension in the tumor microenvironment leads to an increase in the adenosine levels that activate ARs in immune or cancer cells. The activation of the different ARs may have opposing effects in modulating cell cycle or immunity, depending on different factors. Thus, targeting the adenosinergic axis, including its generating enzymes and receptors, may represent a key strategy for cancer therapy. Moreover, since the proper role of every component of the adenosine pathway has yet to be fully understood, the discovery of small molecules as new pharmacological tools is needed.

Authors are invited to submit original articles presenting their research in this area of investigation. The proposed topics include, but are not limited to, new AR ligands and CD39 and CD73 inhibitors, designed as chemical probes for the study of the pharmacological role of adenosine in cancer. Review articles summarizing current knowledge on these topics are also of interest.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Because of your expertise in the field of drug sciences, I kindly invite you to consider publishing your current work, in the form of a research article or a review, in the open access electronic journal *Pharmaceuticals*.

*Pharmaceuticals* is characterized by an active editorial board and a dynamic editorial staff. Manuscripts are peer-reviewed and a final decision is provided to authors within 4–6 weeks after submission. Papers are published on the web immediately after acceptance. For details on the submission process or any other matter, please do not hesitate to contact us.

We hope to handle your contribution to *Pharmaceuticals* soon.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Pharmacology & Pharmacy*) / CiteScore - Q2 (*Pharmaceutical Science*)
