Message from the Guest Editors

Dear Colleagues,

Diabetic retinopathy remains the first cause of blindness in the younger and active population, despite the major recent advances achieved in the reduction of diabetic macular edema (DME). In fact, many aspects of diabetic retinopathy are not targeted by anti-VEGF therapy or by corticosteroids, and vision gain still remains limited for many patients.

New molecular targets have been identified in diabetic retinopathy pathogenesis, which are involved in ischemia, neuronal cell death, glial metabolism, or vasculopathy, and old drugs as well as new drug candidates targeting these pathways have been discovered and evaluated in animal models.

In this Special Issue, we will summarize the benefits of the treatments currently available for DME and present potential new drug candidates for this devastating disease.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1 (*Pharmaceutical Science*)
