Sofia, Bulgaria

Deadline for manuscript
submissions:

15 July 2024

Message from the Guest Editor

Stress-induced damage in proteins, lipids and nucleic acids leads to an increased accumulation of reactive oxygen species (ROS), which cause oxidative damage. One process in plants that is strongly affected under stress is photosynthesis. The impact of stress factors on plants depends on their intensity, frequency and duration, as well as the plant species. Plants evolve different adaptation mechanisms to survive the harmful effects of the environment. Studies in past years have revealed that plants have different sensitivities to stress factors. Despite many studies working to elucidate the mechanisms of plant tolerance to abiotic stress factors, the exact mechanisms are not fully understood. Therefore, the study of the influence of abiotic stress factors on the growth, physiology, biochemistry and photosynthesis of different plant species is of great importance in order to clarify the mechanisms of tolerance in plants.

This Special Issue aims to show the molecular mechanisms associated with plant tolerance upon various abiotic stresses, such as salinity, drought, temperature, ultraviolet radiation and heavy metals.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
