Message from the Guest Editors

Dear Colleagues,

Photosynthesis is the major process leading to primary production on Earth. The process of photosynthesis is very dependent on environmental variables such as photoactive radiation, water availability, temperature, CO₂, salinity, etc. For most crop plants, change in the temperature and CO₂ extremes leads to considerable changes in leaf morphology and structure, dry matter of roots, stems, leaves, and whole plant, as well as the photosynthetic rate, transpiration, and stomatal conductance. Under climatic extremes such as temperature, drought, and CO₂, there is a need for thorough improvement in photosynthetic key limiting factors such as stomatal conductance, mesophyll conductance, biochemical capacity combined with RuBisCo, Calvin–Benson cycle, thylakoid membrane electron transport, non-photochemical quenching, and carbon metabolism or fixation pathways. This Special Issue deals with different approaches to detecting, understanding, and improving the photosynthetic activity of different crops under extreme environmental conditions.

plants

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
