Message from the Guest Editors

In invaded regions, alien plants frequently evade predation pressure from both above- and below-ground organisms. Alien plants may trade off their resource allocation in response to their interactions with biota in invaded habitats. In invaded ecosystems, do the interactions between invasive plants and above- and below-ground organisms promote invasion or have more detrimental effects? How do these interactions adapt to environmental changes? What are the key factors that drive changes in interspecific interactions within invaded ecosystems? Investigating the newly established interactions of alien plants can contribute to a deeper understanding of the mechanisms underlying plant invasion and enhance the theoretical framework of invasion ecology. Solutions based on species interactions can offer a theoretical foundation for preventing and managing the invasion of alien plants.

Deadline for manuscript submissions:

30 December 2024

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
