Message from the Guest Editors

Dear Colleagues,

Globally, more than half of medicinal and aromatic plant resources are being collected from the wild. Forest medicinal plants and berries are especially valued because they are free of pesticides and other kinds of chemicals commonly used in agriculture. Research into the genetic diversity of natural berry and medicinal plant resources may reveal their ability to adapt to changing climate conditions as well as promote their in situ conservation and development of new cultivars. Particular attention should be given to the study of secondary metabolites found in these plants, as they not only present major quality indicators of new cultivars but are also important in chemotaxonomy. This Special Issue will highlight the advances in understanding the genetic, chemotypic, and ecotypic diversity of berry and medicinal plants and will contribute to the sustainable use of their resources.

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
