## Lipid Metabolism in Plants

Guest Editors:

**Prof. Dr. Hyun Uk Kim**

Department of Bioindustry and  
Bioresource Engineering, Plant  
Engineering Research Institute,  
Sejong University, Seoul 05006,  
Republic of Korea

**Dr. Kyeong-Ryeol Lee**

Department of Agricultural  
Biotechnology, National Institute  
of Agricultural Sciences, Rural  
Development Administration,  
Jeonju 54874, Korea

Deadline for manuscript  
submissions:

**closed (29 February 2020)**

### Message from the Guest Editors

In plants, lipids function in a variety of ways. Lipids are a major component of biological membranes and are used as a compact energy source for seed germination. Fatty acids, the major lipids in plants, are synthesized in plastid and assembled by glycerolipids or triacylglycerols in endoplasmic reticulum. The metabolism of fatty acids and triacylglycerols are well studied in most Arabidopsis model plants by forward and reverse genetics methods. However, research on the diverse functions of lipids in plants, including various crops, has yet to be completed. In this Special Issue, we will cover a variety of areas to identify lipid metabolism in plants. The papers will cover a variety of topics, including fatty acids and glycerolipids, lipid trafficking and channeling, lipid signaling, storage lipids, extracellular lipids, lipid biotechnology in cyanobacteria, and algae and plants. Selected papers for this Special Issue have undergone a rigorous peer-review process aimed at a rapid and wide dissemination of research results, development and applications.

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
