Message from the Guest Editors

Dear Colleagues,

Renewable and biodegradable natural fibers (such as hemp, sisal, jute, kenaf, flax, and others), which are abundant, low-cost and eco-friendly, have been widely used in human society. With the catastrophic change caused by global climate and the depletion of fossil resources, complete recycling and valorization of these natural fibers for value-added materials is significant and meaningful. In fact, natural-fiber-reinforced polymer composites with various merits have recently attracted extensive attention due to the suitable mechanical property of natural fibers. Nevertheless, it is still imperative to develop more natural fiber polymer composites. This Special Issue aims to present the latest scientific and technical advances in materials development, processing, characterizations, and applications of natural fiber polymer composites. Original articles and reviews on this subject are welcome in this Special Issue.

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 5.0.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (*Polymer Science*) / CiteScore - Q1 (*Polymers and Plastics*)
