Message from the Guest Editors

Dear Colleagues,

Optimization and process control methods each have their own distinguishing characteristics. They are associated with the instability of external conditions (composition of raw materials, performance requirements, changing dynamic properties of objects, etc.). Therefore, solutions must be “robust”. For many processes (heat transfer, separation, chemical reactors), thermodynamic irreversibility plays an important role when the optimal solution minimizes the production of entropy. The linearized dynamics is the same in most cases, and is described by aperiodic links and pure delay, which makes recommendations for choosing stabilizing controllers quite general.

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
