submissions:

30 April 2024

Message from the Guest Editors

Currently, various strategies and solutions have been adopted by various countries for the purpose of eliminating anthropogenic CO₂ emissions. These approaches include the following: improving energy efficiency; using energy sources that are less carbon-intensive (i.e., natural gas, hydrogen, and nuclear power) or renewable (i.e., solar, wind, hydropower, and geothermal and bio-energy); and enhancing biological sinks (i.e., afforestation and reforestation); and CO₂ capture and storage (CCS).

This Special Issue aims to compile contributions (in the form of research articles, letters, reviews, and communications) to update developments in the areas of carbon mitigation and utilization in support of future developments in the low-carbon global economy with net carbon emissions and the availability of reagents.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and
Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
