Message from the Guest Editors

Dear Colleagues,

Lithium-ion batteries are used on a large scale in electronic devices and electric vehicles for their high energy density and long cycle. In the background of carbon neutrality, electric vehicles will gradually replace fuel cars, and lithium-ion/sodium-ion battery scale energy storage will also be used in wind and solar green energy in large energy storage. Here, for the current lithium-ion battery's high energy density and long cycle, we initiated this Special Issue on advanced battery material design and process. The content can include new battery electrode materials, battery design and battery coating and assembly processes.

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**,
SCIE (Web of Science), **Ei Compendex**, **InspeC**, **AGRIS**, and **other databases**.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
