Message from the Guest Editor

Dear Colleagues,

Enzymes play a central role in life, catalyzing many chemical and biological processes occurring in nature. Understanding how enzymes catalyze their reactions is essential, both from fundamental and practical perspectives, with application in a variety of areas, from more basic research that aims to understand how different events occur in the cell, to the development of new treatments for important diseases, and even in industrial biocatalytic applications.

Computational methods can be used to simulate and model different enzymatic reactions, circumventing some of the limitations of the experimental methodologies typically used, and providing an alternative strategy to complement the information obtained from these methods. This Special Issue focuses on the application of computational methods for modeling and simulating enzymatic reaction mechanisms, including methodological developments and computational studies addressing the activity of specific enzymes.

Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
