Thermophysical Properties of Working Mediums and Their Application in Thermodynamic Cycles

Guest Editors: Message from the Guest Editors Dr. Yu Liu Topics include, but are not limited to: Dr. Ian H. Bell Prof. Dr. Giovanni Di Nicola Dr. Xiangyang Liu molecular simulations based on forced fields) Prof. Dr. Oibin Li (2) Modeling the thermophysical properties from ML **Dr. Piotr Lampart** Deadline for manuscript submissions: group contribution method, corresponding closed (15 June 2023)

mdpi.com/si/101220

(1) Supplementing the thermophysical property data of fluids, especially for mixtures of working media. The approaches include both laboratory measurements and computer experiments (from quantum chemistry or from

perspectives. Supervised learning algorithms (support vector machine, decision tree, nearest neighbors, artificial neural network, etc.) are the most commonly used methods in this field, while incorporating them with physical property knowledge (e.g., chemical structures, states principle) to develop hybrid models is the preferred option. Moreover, papers using techniques from unsupervised learning and reinforcement learning for tasks such as data preprocessing, parameter optimization are also encouraged.

(3) Exploring and screening potential working media based on ML. For example, selecting the optimal working medium based on the ML-predicted thermophysical data, so as to ensure the thermal economy of the power system under the specific working condition.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases. **Journal Rank:** JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering* (miscellaneous))
