Principles of Modular Design and Control in Complex Systems

Collection Editor:

Dr. Cong T. Trinh
Department of Chemical and Biomolecular Engineering, The University of Tennessee, Knoxville, TN 37996, USA

Message from the Collection Editor

Modular design is at the core of modern engineering, which enables rapid, efficient, and reproducible construction and maintenance of complex systems across applications. Remarkably, modularity has recently been discovered as a governing principle in natural biological systems from genes to proteins to pathways to cells and microbial communities. The convergent knowledge of natural and engineered modular systems will be the key to drive modern biotechnology to address emergent challenges associated with health, food, energy, and the environment. This Special Issue calls for contributions across a broad range of disciplines that address recent experimental, computational and/or modeling advancements in modular design and control of complex systems.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.
Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
