

## Laser Scanning for Quantifying Sustainable Forest and Agriculture Management

Guest Editors:

**Prof. Dr. Chi-Kuei Wang**

Department of Geomatics,  
National Cheng Kung University,  
Tainan, Taiwan

**Prof. Dr. Chinsu Lin**

Department of Forestry and  
Natural Resources, National  
Chiayi University, Chiayi 600355,  
Taiwan

**Prof. Dr. Juha Hyypä**

Department of Remote Sensing  
and Photogrammetry, Finnish  
Geospatial Research Institute,  
02430 Masala, Finland

Deadline for manuscript  
submissions:

**26 May 2024**

### Message from the Guest Editors

Technological advancements of laser, scanning electromechanics, GPS/IMU, and vehicle platforms have realized a wide variety of laser scanning systems, ranging from satellite, airborne, unmanned aerial vehicles (UAVs), and unmanned ground vehicles (UGVs) to single-person backpack, hand-held, and even pads. Point clouds and waveforms collected from some of these systems have been utilized and proven their value for forestry and agricultural management, while other systems require further study to unleash their full potential. Novel algorithms are also sought to expedite information extraction from the ever-growing data volume.

This Special Issue aims at studies covering different uses of laser scanning systems in agricultural and forest sciences. Topics include but are not limited to an investigation of the characteristics of various laser scanning systems, such as point density, penetration, intensity values, case studies to derive forest structures or single tree parameters and to estimate crop yield, and algorithm development to handle large volumes of data based on artificial intelligence or machine learning techniques.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
