submissions:
closed (25 March 2024)

Message from the Guest Editors

Tides are basic and important movements in the ocean. The non-negligible influences of tides and tidal mixing on ocean circulation and marine ecosystems have been indicated by numerical models, in situ observations, and remote sensing data. Now, more than ever, remote sensing data play a vital role in tidal research, more high-frequency and accurate observation data of sea levels, sea surface temperature, and chlorophyll-a concentrations in the global ocean, especially coastal areas, are available. Multisource satellite altimeter data such as TOPEX/Poseidon and Jason have been assimilated into tidal models and have greatly improved the accuracy of numerical simulations of barotropic tides and internal tides.

Therefore, this Special Issue of Remote Sensing endeavors to assemble novel research that utilizes multisource remote sensing data and numerical models to study the spatial-temporal variations of barotropic tides and internal tides, as well as tidal influences on ocean circulation and marine ecosystems. We welcome you to submit one or more research and review articles to the Special Issue on “Remote Sensing and Numerical Simulation for Tidal Dynamics”.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
