submissions:

closed (28 September 2021)

Message from the Guest Editors

The transition to a world-renewable paradigm, under a context of mitigation of climate change and reducing carbon emissions is now at the top of public agenda, and its relevance in this century will surely grow. In particular, biomass is a major source of renewable decentralized energy and chemicals with a potential fundamental role as a complement for other sustainable energy providers.

In this context, this Special Issue of *Resources* wants to deliver a comprehensive interdisciplinary approach to the use of agro-forestry biomass involving topics such as:

- I. The impact of agro-forestry management in the quantity and quality of biomass production;
- II. Thermochemical conversion of biomass from energy cultivations;
- III. Thermochemical conversion of biomass from agro-forestry residues;
- IV. Biomass in a context of renewable transition.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank: CiteScore - Q1 (*Nature and Landscape Conservation*)
