closed (31 October 2023)

Message from the Guest Editors

This Special Issue is part of the MDPI journal initiative to promote and support the contributions of women in research. The aim is to collect research and review articles that highlight the scientific achievements of women in the field of rheumatology.

We welcome all research led by female scientists, where male scientists may offer support for the initiative as co-authors. We welcome submissions from all authors, irrespective of gender. The following are offered (as an incomplete list of options) for submission topics:

- The premises inherent to rheumatology.
- The history of rheumatology and its principals.
- The character of diseases affecting bones and joints.
- The character of immunologic/autoimmune diseases.
- The character of the rare and multisystem diseases.
- Pattern recognition aspects of differential diagnosis.
- Patterns of disease as population phenomena.
- Technical aspects of utilizable diagnostic modalities.
- Critical analysis of therapeutic interventions and their pros and cons.
- Technical aspects of utilizable therapeutic modalities.
- Archeological/zoological/paleontological evidence of/correlates with disease.
