Deadline for manuscript submissions: closed (31 December 2021)

Dear Colleagues,

Insurance companies continue to gather increasing volumes of information that are being used for improved data-driven decision making. In the past few years, this has generated an increasing interest and need for data mining tools and techniques to analyze data, especially big data, in insurance and actuarial science. Data mining has potential applications in all personal and commercial lines of insurance: life, non-life, health and pensions. Although data mining is clearly useful in insurance and actuarial science, it faces many challenges during its implementation.

This Special Issue aims to collect recent developments of applying data mining techniques in insurance and actuarial science. We welcome original research articles that develop data mining techniques and case studies that showcase applications. We also encourage data mining work derived from collaborative efforts between academia and the industry.

Message from the Editor-in-Chief

Risks is published in Open Access format – research articles, reviews and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes contributions that

- contribute with insight, outlook, understanding and overview, no matter how simple they are;
- show creativity in pedagogical tricks and techniques;
- help the transfer of theoretical research to public and private application;
- show responsibility for societal impact.

The scientific community and the general public have unlimited free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within Scopus, ESCI (Web of Science), EconLit, EconBiz, RePEc, and other databases.

Journal Rank: CiteScore - Q1 (Economics, Econometrics and Finance (miscellaneous))
