Deadline for manuscript submissions:

closed (31 January 2020)

Message from the Guest Editor

Dear Colleagues,

Historically, piezoelectricity has always been one of the preferred transduction mechanisms in electromechanical sensors at a macro-scale, because of the possibility of achieving significantly higher coupling efficiency in piezoelectric transducers compared to alternatives such as capacitive transducers. However, with the emergence of micro-machined sensors, capacitive transduction became the main mechanism of choice, as the integration of a suitable piezoelectric material into the microfabrication foundries turned out to be extremely complicated, and in many instances impossible. This trend started to change in the early 21st century, once a reliable deposition of highquality piezoelectric AlN on silicon substrates was demonstrated through the sputtering process. Since then, other thin-film piezoelectric materials have been explored, and the commercial application of piezoelectric transduction for sensing has increased significantly, and this trend is expected to continue. In this Special Issue, we focus on the recent advances in the field of thin-film piezoelectric sensors.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases. **Journal Rank:** JCR - Q2 (*Instruments & Instrumentation*) / CiteScore - Q1
