Message from the Guest Editors

Recently, increasing material consumption due to industrial growth has led to the rapid depletion of natural resources, including energy and raw materials. Additionally, with increasing population, urbanization and economic development, especially in developing countries, waste generation is increasing sharply. For most of this waste, effective uses have not been found, causing environmental degradation, a waste disposal crisis, and resource depletion.

Appropriate management of such waste is a deeply difficult technological challenge. Thus, sustainable waste utilization is a major concern for environmental protection and natural resource conservation.
