Message from the Guest Editor

Microcystins (MCs) are highly toxic substances widely distributed in lakes, and pose a hazard to human health. A large number of detection methods have been developed to avoid the harm of MCs. However, current detection methods can only detect MCs in water samples, have low sensitivity and require complex operation procedures. Therefore, we believe that it is necessary to develop a novel tool for the detection of MCs in lake waters and biological systems. Thus, in this Special Issue, we solicit papers which develop novel environment materials for detecting MCs with sensitivity and selectivity.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
