### Message from the Guest Editors

Many reports claim that the planet is on the verge of a catastrophic collapse. The repercussions (and the side-effects) of the business activities conducted by companies in modern economies and around the world include problems such as resource scarcity and overexploitation, climate change, pollution, starvation, and poverty.

Calls for more responsible resource management are being made in this context, while also highlighting the need for organizations globally to better conceptualize the opportunities presented by sustainability and, as a result, to incorporate sustainable strategies into their internal decision-making systems. At the same time, stakeholders throughout the world are pressuring businesses to enhance the amount of transparency in their reporting and disclosure of their strategies, activities, and the consequences that follow in terms of their effects on the economy, society, and the environment.
