Message from the Guest Editors

Dear Colleagues,

Landscape fragmentation (LF), i.e., the process where large habitat patches become smaller and more isolated, has been studied recently by a variety of scholars. Most of the time, LF negatively affects wild fauna and flora and depends mainly on human activities, such as deforestation, urbanization, and transport and mobility infrastructures. Spatial, landscape, and transport planning are typical instruments for designing defragmentation measures (such as ecological networks, green and blue infrastructures, etc.) in the perspective of the reduction of LF in rural, periurban, and urban contexts. As LF is a product of the interaction between human activity and the environment, the design of sustainable counteractions relies on the development of proper environmental assessment procedures, including environmental impact assessment (EIA), strategic environmental assessment (SEA), and appropriate assessment (AA) concerning Natura 2000 sites. The integration of environmental assessment procedures since the early stages of the planning processes is key to the minimization of the effects connected to the increase of LF in a given area.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
