Dr. Arindam Sinharoy

Department of Microbiology, National University of Ireland Galway, H91 TK33 Galway, Ireland

Dr. Bhaskar Jyoti Deka

Department of Hydrology, Indian Institute of Technology Roorkee, Roorkee 247667, India

Deadline for manuscript submissions:

closed (31 December 2022)

Message from the Guest Editors

Industrial development, unplanned urbanization, and rapid population growth have led to serious environment and human health concerns. Among the various factors, discharge from industries plays a key role in polluting water bodies, which reduces the already limited drinking water sources of an ever-growing population.

Such unplanned industrial discharge further leads to soil pollution and contamination of the ground water table. Hence, with the ever-growing public concern about the environment and stringent governmental regulations, it is necessary to explore novel technologies to treat such wastewater. Biological treatment technologies and/or nature-based solutions involving microorganisms or plants are considered a low-cost, sustainable, and environment-friendly method for treating industrial effluents and restoring polluted land. Another model that has attracted a lot of attention recently is the waste-fed biorefinery concept, in which a wide range of products are obtained from waste using biochemical routes.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
