### **Message from the Guest Editors**

Dear Colleagues,

Cooperatives are unique organisations and have their own approach to collaboration in the economy. The economic theories of cooperatives creation present them as groups of people who want to both resist and adapt to the transformations of their own production or consumption activities by creating collective enterprises whose development they direct according to their own interests. Members of cooperatives are both owners and users of the organizations they create and which they govern. This logic of action is a fundamental characteristic of cooperative organizations with an important potential for the economy and society more generally.
