### Message from the Guest Editors

Dear Colleagues,

Sustainable development emphasizes the enhancement of environmental, social, and economic resources, with all three being critical to meet the needs of current and future generations. Bottlenecks in the way sustainable development has been approached in practice (with a focus on environmental protection and negative externalities) provide a basis for understanding the evolution of the Green Economy concept. In the present scenario, green technologies are playing a significant role in changing the course of nations' economic growth towards sustainability and providing an alternative socio-economic model that will enable present and future generations to live in a clean and healthy environment, in harmony with nature.
