### **Message from the Guest Editors**

Urban areas are facing numerous challenges related to changing climate conditions, population growth, and land consumption. Many strategies are being studied to mitigate such challenges: Among them, “passive” ones allow mitigation without consuming additional energy, i.e., by exploiting the intrinsic performance of buildings and urban elements themselves or by involving citizens in adaptation and sustainability actions.

Deadline for manuscript  
submissions:  
**closed (28 February 2022)**

We aim at gathering original research works and review articles focused on these two main areas. Contributions should investigate one of the two or their synergistic integration, which uncovers high potentialities towards sustainability.
