Message from the Guest Editor

This Special Issue, entitled "Symmetry in Geometric Functions and Mathematical Analysis", is devoted to the publication of high-quality research, especially relating to geometrical aspects and harmonic and quasiconformal mappings (including applications in allied areas of mathematics and mathematical sciences). The issue will provide a forum for researchers and scientists to communicate their recent developments and to present recent results in the complex analysis theory of one and several variables, as well as application in algebraic geometry, number theory, and in physics, including the branches of hydrodynamics and quantum mechanics.

Special Issue

Editor-in-Chief

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (*General Mathematics*); Q1 (*Physics and Astronomy*); Q1 (*Computer Science*)
