Deadline for manuscript submissions:

closed (15 December 2022)

Message from the Guest Editor

FCM/FCA could be considered a complex mixture of chemicals whose risk is very difficult to assess as many substances are not well analytically identified, quantified, and toxicologically characterized.

The Special Issue aims to present recent research studies on the latest methods and approaches to better assess the risk of FCM and FCA, in terms of hazard identification, exposure characterization, and hazard assessment to ensure the safety of consumers. Studies may focus on but are not limited to migration modeling, improvement of food simulants, and conditions of contact, chemical analysis, toxicity assessment, in silico methods (TTC, QSAR, etc.), extraction protocols, in vitro bioassays (genotoxicity, endocrine disruption), and mixture effect. The contributions could also cover the risk assessment of new materials (bio-based, compostables) or the use of FCM in a closed-circuit loop (reuse or recycling).

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [Embase](#), [CAPus / SciFinder](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Toxicology*) / CiteScore - Q2 (*Chemical Health and Safety*)
