Message from the Guest Editors

Dear Colleagues,

The Special Issue will focus on zoonotic parasitic diseases, encouraging interdisciplinary research for a holistic understanding. Key topics include:

Evolving Parasite-Host Dynamics: Studying genetic and ecological factors influencing changing patterns of host specificity and adaptation in zoonotic parasites.

Climate Change and Vector-Borne Diseases: Examining the impact of climate change on vector distribution, abundance, and transmission of zoonotic parasitic diseases. Proposing mitigation strategies.

One Health Approaches: Highlighting the interconnections between human, animal, and environmental health. Showcasing successful interventions for prevention and control of zoonotic parasitic diseases.

Novel Diagnostics and Therapeutics: Showcasing advancements in diagnostic tools, therapies, drugs, and vaccines against zoonotic parasitic diseases.

Surveillance and Early Warning Systems: Evaluating existing surveillance systems and suggesting innovative approaches for early detection and rapid response to emerging zoonotic parasitic diseases.
