Message from the Guest Editors

Viral agents represent one of the main groups of pathogens causing morbidity and mortality in humans. Most of these potential agents cause major epidemics and pandemics, as we have seen recently with SARS-CoV-2. The prevention and control of viral spread are highly desirable. In this sense, we encourage the submission of manuscripts with promising results in the research field of antiviral and vaccines, including but not limited to (1) traditional inactivated or live attenuated vaccines, virus-vectored, subunit, viral-like particle, nucleic acid-based vaccine development; (2) new or repurposed molecules that can act directly against the viruses or modulate molecules of the immune system involved in the pathogenesis of viral pathogens of high clinical relevance.

Deadline for manuscript submissions:

30 November 2024

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (*Immunology*) / CiteScore - Q1 (Pharmacology (medical))
