Stable Isotopes as Groundwater Discharge Tracers: Recent Developments

Guest Editors:

Dr. Jorge Jódar Bermúdez

Centro Nacional Instituto
Geológico y Minero de España,
Consejo Superior de
Investigaciones Científicas (IGME-
CSIC), Zaragoza, Spain

Prof. Dr. Albert Soler

Grup MAiMA, SGR Mineralogia
Aplicada, Geoquímica i
Geomicrobiologia, Departament
de Mineralogia, Petrologia i
Geologia Aplicada, Facultat de
Ciències de la Terra, Universitat
de Barcelona (UB), Barcelona,
Spain

Deadline for manuscript
submissions:

20 June 2024

Message from the Guest Editors

Stable isotopes are powerful tools for characterizing both the behavior and processes in groundwater systems. They are also useful for quantifying water and solute exchanges between surface and groundwater compartments, driven by various hydrological processes, from precipitation to groundwater discharge. The information obtained helps understand the dynamics of aquifers, including their recharge, flow patterns, age and vulnerability to contamination. This knowledge is essential for effective groundwater management and sustainable use of water resources.

In this Special Issue of *Water*, we encourage submissions describing the application of stable isotopes to explore the role of different hydrological and hydrogeochemical processes driving aquifer behavior in terms of the isotopic content in groundwater.

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology
and Environment, Centre
National de la Recherche
Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
