Soil and Groundwater Quality and Resources Assessment

Guest Editors:

Dr. Wanjun Jiang

1. Tianjin Center, China Geological Survey, Tianjin 300170, China 2. North China Center for Geoscience Innovation, China Geological Survey, Tianjin 300170, China

Prof. Dr. Yizhi Sheng

State Key Laboratory of Biogeology and Environmental Geology, China University of Geosciences, Beijing 100083, China

Deadline for manuscript submissions:

30 December 2024

Message from the Guest Editors

Dear Colleagues,

Human activities, particularly in regions experiencing the development of industry and agriculture and the exploitation of mineral resources, pose increasing threats to terrestrial ecosystems and groundwater environments. Such concerns center around the type, distribution, source, migration, transformation, and ecological health risks associated with various contaminants in soil-groundwater ecosystems. The concentrations of contaminants in these ecosystems are complex due to long-term water-rock interactions, diverse groundwater recharge patterns, hydrologic-biogeochemical processes, and human exploitation. Notably, the threat extends to both traditional and emerging inorganic and organic pollutants, which find their way into human bodies bioaccumulation, food chains, and drinking water, thus leading to health risks such as chemical toxicity, radiation exposure, and carcinogenic effects.[...]

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
