Deadline for manuscript
submissions:

closed (21 September 2023)

Message from the Guest Editor

Dear Colleagues,

Anthropogenic activities are responsible for climate change and a major source of pollution in the oceans. The increase in atmospheric carbon dioxide concentrations has driven oceanic warming and acidification, which may over time change contaminants' bioaccessibility, resulting in new challenges and threats to marine ecosystems. This Special Issue invites authors to contribute original research articles reporting interactive effects, synergistic and/or antagonists, of climate change and contaminants in marine ecosystems. This issue is an excellent opportunity to review this line of research and to propose and develop new approaches.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
