## Integrated Watershed Management Modeling

Guest Editors:

**Prof. Dr. Junye Wang**

Faculty of Science and  
Technology, Athabasca  
University, Athabasca, AB,  
Canada

**Dr. Narayan Kumar Shrestha**

University of Guelph, ON, Canada

Deadline for manuscript  
submissions:

**closed (31 October 2021)**

### Message from the Guest Editors

Watersheds consist of terrestrial and aquatic systems. Natural biogeochemical and hydrological processes interact with social and economic drivers through land-use change and human activities at different scales. Social scientists and economists have different approaches to studying land-use and land-use change. Policymakers and social scientists have together identified the need to explore the potential indicators of how human activities and climate change affect land-use change and associated impacts, such as sediment, water quality, greenhouse gas emissions, and toxic substances transferred by the agriculture and industry to the river, and hydrological and weather extremes. Therefore, traditional approaches are insufficient to understand a river basin system for sustainable development and watershed management. Using an integrated model, greater levels of realism can be incorporated to analyze and evaluate how biogeochemical, hydrological, and social processes interact. [...]

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
