Deadline for manuscript submissions:

**closed (20 December 2022)**

### Message from the Guest Editors

In many rivers, suspended sediment has been identified as one of the leading causes of river impairment. Therefore, a deeper understanding of suspended sediment transport mechanisms and dynamics, as well as an accurate quantification of suspended sediment fluxes, is important for sustainable water and sediment management purposes.

In this Special Issue, we invite papers that investigate suspended sediment transport at catchment scale. Papers should improve our knowledge on factors controlling suspended sediment transport mechanisms across different landscapes and provide robust diagnoses and guidelines to decision makers. We especially encourage contributions dealing with long-term monitoring datasets, comparative studies, and those that attempt high-resolution monitoring across multiple temporal and spatial scales. In addition, we welcome studies using new technologies and innovative methods for monitoring suspended sediment transport, and those investigating the impact of global change on sediment transport by rivers.

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
