## Sustainable Management of Water and Wastewater

Guest Editors:

**Prof. Dr. John Zhou**

School of Civil and  
Environmental Engineering,  
University of Technology Sydney,  
Sydney, Australia

**Dr. Muhammad Faheem**

School of Environmental Studies,  
China University of Geosciences,  
Wuhan 430074, China

Deadline for manuscript  
submissions:

**closed (30 September 2022)**

### Message from the Guest Editors

Water is one of the most vital natural resources on the planet, and becomes widely polluted from human activities. In many countries, reuse is already an important aspect of water management, but there are still concerns to be resolved to ensure that it has no negative effects on the environment or public health. Wastewater may contain a variety of contaminants that must be removed before it can be discharged back into the environment. Over the last thirty years, wastewater treatment has evolved from designing treatment technologies for safe discharge into natural water bodies, employing techniques, such as physical water treatment, biological water treatment, chemical treatment, and sludge treatment, to addressing a variety of human health issues, including wastewater recycling, waste treatment solutions, and pollution prevention.

We are pleased to invite you to contribute to this Special Issue, which aims to provide a critical update of recent development in water and wastewater treatment, water quality modelling, water resource management, resource recovery from wastewater, decentralized wastewater treatment, and the recycling and reuse of treated wastewater.

France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
