Message from the Guest Editors

The spread of the COVID-19 virus is a global health emergency. Many governments have proposed control and preventive interventions.

Strict epidemic prevention and control can help reduce the risk of infection, but interpersonal isolation and economic closure have severely impacted social and economic activities. However, governments' relief packages support people through economic difficulties, and policies to boost consumption have stimulated and driven economic recovery. The application of digital tools has become an alternative mode of operation for education, business, and social activities.

This Special Issue aims to publish evidence and observations in the field, covering, but not limited to, the following: economics; management; business; education; leisure; tourism; hospitality; humanities; society; public health; resource allocation; epidemic prevention policy; preventive measures; supply chain; logistics; risk; communication; case studies.

We welcome the submission targeting any of these core research questions. The main goal of this Special Issue is to explore and address the core research issues in social science caused by the COVID-19 pandemic.
