Dear Colleagues,

This SI will be a great opportunity to disseminate recent developments in the field of analytical and numerical techniques, and articles that discuss novel phenomena and behaviors concerning several aspects of symmetry in nonlinear dynamics, chaos and control are welcome.

Researchers and practitioners are invited to submit original, unpublished research regarding the rapidly developing field of symmetry in nonlinear dynamics, chaos and control and their applications to engineering and science.

Areas of interest include, but are not limited to, both theory and applications concerning the following topics:

Dynamical systems; Mathematical physics; Epidemiological models Rumor dissemination; Complex systems.
